

Junior Back-end Developer

Intern position

Are you a born problem solver that has a passion for ones and zeros, and are a lover of all things tech and digital?

Do you have coding skills, persistence and determination, and a desire to assist our digital team to code, test, debug websites, web apps, platforms and eCommerce solutions? Does being surrounded by a team of 4 developers and 10+ other creatives, marketers, storytellers, designers and project managers excite you?

Are you curious, driven, can think strategically and independently, can think objectively, make solid decisions and have a team and entrepreneurial spirit? If you can cope with a bit of creative madness in an open plan, fast-paced team environment, have the passion and some of the skills suited to our industry... apply to be a Firebrander and join us on our quest to take our clients' stories to the world.

Our ideals (like to haves):

- Have an awesome attitude, endless curiosity and drive, and like people!
- Work to a brief, deadline and budget, take direction and be self-driven and are prepared to find the answer when you don't know it.
- Great verbal and written communication skills.
- Knowledge of some coding languages including PHP and JavaScript frameworks.
- Basic programming experience.
- Understanding of databases (MySQL) and operating systems (Linux).
- Enjoy problem-solving and the ability to learn new software and technologies quickly.
- Some examples of how you have applied your skills - a website, a code example or an application. (Personal projects or class work is acceptable).
